Research

My primary research areas are (1) social communication (health communication, social marketing, peer influence, scientific communication), (2) social cognition (attitudes, self and person perception, judgment and decision making, unconscious mental processes) and (3) research methodology (assessment, psychometrics, regression methodology). Much of my current and forthcoming research focuses on social influence occurring within immersive virtual reality environments. This work is focused (a) formal social influence (social and consumer marketing in virtual environments), (b) informal social influence (effects of online peer networks on health-related decisions, behaviors and outcomes) and (c) use of virtual environments to simulate real-world judgments and decisions (primarily in the field of emergency evacuation).
